

DUNGALA SAI KUMAR

📍 Madurai, Tamil Nadu, India ✉ saikumard912@gmail.com ☎ +91-7396295445 📱 in/sai-kumar-dungala-393538289

SUMMARY

Computer Science Engineering student with experience and passion in cybersecurity, networking, analysis of security operations center, threat detection, and secure software development. An expert at phishing detection, network monitoring and secure, scalable solutions design.

EXPERIENCE

Cloud Computing Intern

Micro Information Technology Service

May 2025 - June 2025, Remote

- Increased infrastructure optimization for high availability – deployed and managed cloud based apps on platforms such as AWS with 40% faster deployment times.
- Deployed virtualization technologies (Docker) and scalable storage solutions (S3), ensuring robust data handling and fault tolerance.
- Designed real-time cloud systems that incorporate auto-scaling strategies, load balancers and monitoring tools to ensure seamless performance and support dynamic workloads during peak periods.
- Built-in CI/CD pipelines for automation of testing and deployment processes, improving software reliability and reducing release cycles for cloud-based projects.

SKILLS

Penetration Testing, Vulnerability Assessment, Network Security, SOC Analyst

EDUCATION

Bachelor of Technology in Computer Science Engineering - Cybersecurity

Kalasalingam Academy of Research and Education • Tamil Nadu, India • 2023 Present

PROJECT

Phishing Detection and Network Traffic Monitor with AI Integration

Independent Project • link-armor.vercel.app • October 2025 - December 2025

- Created a real-time phishing detection platform that scans URLs, emails and IP addresses against multiple security engines to detect phishing threats before user interaction.
- Developed a high-speed multi-engine threat scanning system that takes inputs in less than 500ms to quickly assess risk.
- Designed a real-time scanning pipeline to ensure low latency and fast detection of threats, enabling real-time decision making.
- Developed a fast and scalable security scanner and provided near real-time analysis to multiple engines.

Mobile Device Forensics – PIN Resilience Testing Platform

Personal Project • clarionet.vercel.app • September 2025 - November 2025

- Designed a mobile device forensic platform with web-based web application that allows for integration of ADB connectivity for Android mobile device analysis and security evaluation.
 - Test authenticated security for 10+ test scenarios in controlled environments and implemented PIN resilience testing workflows.
 - Developed 5+ core modules for a dashboard covering device detection, forensic analysis, security testing and report generation.
 - Developed and embedded automated testing elements, which shortened the manual assessment of the devices by 40%.
-
